

Good Article on Seat Installation

Posted by Sterling Doc - 18 Nov 2012 08:08

In doing some research with how to word the new roll cage rule with regard to the seat installation, I came across this: http://www.circletrack.com/safety/ctrp_0...s_mount/viewall.html

The only slightly confusing point is they are a bit inconsistent on is shoulder belt routing, 1st stating the it should be at or slightly above the drivers shoulders, then that it should be a t a 90 degree angle to the spine, and be lower if the seat is angled back. The second statement is closer to what HANS specifies, which can be found in another good article, here: http://www.schrothracing.com/sdocs/2009_...ion_Instr_uctions.pdf
